

AR Telepresence™ (Augmented Reality)

Exploring Creative Options for Telepresence with High Visual Impact

DVE's expansive patent portfolio leads the industry in Augmented Reality Telepresence. When thoughtfully stage-crafted, this stunning experience creates an impressive image of people appearing to sit on the other side of a table. They appear to be in the actual physical room environment, freed from the borders of a display screen. DVE's ETS, T-50, and Huddle 70 can all be converted for AR Telepresence. Typically such uses are for information kiosks, banking tellers and other high visual impact sites. Practical concerns of black or chromakey backgrounds need to be considered for business class applications. DVE always puts the client first, assisting them to discover the smartest telepresence solution for their needs

- ▶ Impressive transparent effect for telepresence
- ▶ Eye Level Optically embedded camera(s)
- ▶ Used for specialty applications where high visual impact matters
- ▶ Superb 3-D appearing graphics and objects
- ▶ Custom development for clients' unique applications
